

Setting up your VermiTut worm farm

Positioning your VermiTut

- Choose a position that does not get direct sunlight or rain, but also convenient for you to use – close to the house.
- Under the eaves or veranda on the south side of the house is ideal, or even in a carport.
- Worms' ideal conditions are moist but not wet, and approx. 18-26 degrees.
- If they are in direct sunlight, their home can become an oven and cook them.
- If in direct rain, the worm farm can become flooded. Worms aren't particularly good swimmers.

Setting up

- Follow the directions in your users manual

Trouble Shooting
